Professional Summary

Computer Science student specializing in distributed systems, backend engineering, and multi-cloud infrastructure. Experienced in designing event-driven architectures across AWS and GCP using serverless technologies, infrastructure automation, CI/CD, and secure federated authentication.

Core Competencies: Distributed Systems • Multi-Cloud Architecture • Event-Driven Systems • Infrastructure Automation • CI/CD • Serverless Computing • Backend Engineering

Experience

Springer Capital

Backend Intern

Aug 2025 – Nov 2025

Remote

- Developed Flask microservices using SQLAlchemy within a distributed multi-service backend architecture
- Designed REST APIs, database schemas, and internal integrations across an eight-service platform
- Built mock API services and resolved dependency conflicts to improve integration testing workflows
- Collaborated on backend debugging, API validation, and deployment reliability improvements

Projects

Multi-Cloud Serverless Analytics Platform

(AWS, GCP, Pub/Sub, Cloud Run, Firestore)

- Architected multi-cloud event-driven pipelines integrating AWS ingestion with GCP processing
- Implemented Workload Identity Federation (OIDC) for secure cross-cloud authentication
- Built real-time dashboards with anomaly detection, Slack alerts, and asynchronous event processing

Distributed Telemetry Processing Platform

(GCP, Pub/Sub, Cloud Run, BigQuery)

- Designed serverless telemetry pipelines for real-time ingestion and distributed processing
- Implemented dual-path architecture using Firestore and BigQuery for analytics workflows
- Integrated dead-letter queues, retry handling, and CI/CD deployment workflows

Infrastructure Automation Platform

(AWS, Terraform, GitHub Actions)

- Automated cloud infrastructure provisioning using Terraform and GitHub Actions
- Designed monitoring and deployment workflows for scalable infrastructure environments
- Implemented infrastructure-as-code practices for repeatable cloud deployments

Technical Skills

- **Languages:** Python, Java, C/C++, Bash, TypeScript
- **Cloud & DevOps:** AWS, GCP, Terraform, Docker, CI/CD, GitHub Actions
- **Frameworks & Tools:** Flask, FastAPI, SQLAlchemy, React, Git, Linux
- **Concepts:** Distributed Systems, Microservices, Event-Driven Architecture, Infrastructure as Code
- **Soft Skills:** Technical Communication, Problem Solving, System Design Thinking, Collaboration, Analytical Thinking

Education

HKBK College of Engineering

B.E. Computer Science

2023 – 2027

Bangalore, India

Vibgyor High

High School Diploma

2019 – 2021

Bangalore, India
